Leon Kwan

Software engineer
github.com/notsaltylol | linkedin.com/in/kwanleon

From full-stack products to distributed systems, AI workflows, and research. Currently CTO at Khorium; previously at Amazon.

Experience

Khorium | CTO | February 2026 - Present

- Scaled to thousands of concurrent simulation jobs with AWS Step Functions, SQS, and ECS Fargate orchestration.
- Built fault-tolerant ECS workers with DLQ retries and process-isolated meshing so one crash can't stop the pipeline.
- Cut CAD-to-simulation setup from days to minutes, leading 5 engineers building the end-to-end platform.
- Reduced manual workflow steps by 80% with an LLM assistant that drives app logic and UI tools from natural language.
- Built multi-tenant org management with SSO, billing, and entitlements on Stytch B2B, Stripe, and PostgreSQL.
- Built end-to-end integration tests covering the CAD-to-simulation pipeline to catch regressions before release.

Amazon | Software Development Engineer 2 | September 2023 - February 2026

- Doubled code acceptance rate, leading org-wide adoption of AI coding tools like MCPs and Skills.
- Scaled LLM agent for internal HR BI tool to 99.9% availability and 100+ concurrent users via AWS ECS/CDK.
- Delivered custom user settings feature for HR report tooling with React/TypeScript, achieving 70% adoption rate.
- Scaled data analytics backend by 200% in Amazon Athena query concurrency to support 2x user growth.
- Developed full-stack self-service business intelligence tool using React, Java, DynamoDB, driving 100% increase in customers.
- Led complex data transformation efforts for Java proxy service, implementing caching to ensure low latency.
- Mentored junior engineers on scalable service design and deployment strategies.

NEC X | Full Stack Engineer | February 2023 - August 2023

- Built reliable, distributed software from 0 to 1 for startups in NEC's venture studio portfolio.
- Led full stack development, using React/TypeScript/Next.js/Tailwind CSS to create responsive, SEO optimized websites.

Amazon Web Services | Software Engineering Intern | May 2022 - July 2022

- Improved search experience for AWS CloudFormation Registry using OpenSearch and Lambda-driven backfill process.

American Express | Software Engineering Intern | June 2021 - August 2021

- Built a modular pipeline for an incident enrichment AI, increasing application recovery capabilities in Golang.

University of Florida | Teaching and Research Assistant | August 2021 - December 2022

- Developed an autograder for coding assignments from 300+ students, giving feedback on code quality, time complexity, etc.

Education

University of Florida | B.S. in Computer Science | December 2022 | GPA: 3.74

Skills

Python, Java, TypeScript, JavaScript, Go, C++, SQL, Bash, AWS Step Functions, ECS, Lambda, SQS, DynamoDB, CDK, PostgreSQL, React, Next.js, Node.js, Git

Projects & Research

2023 SIGCSE Paper Co-Author | Python, Clang

Logistics, Affordances, and Evaluation of Build Programming: A Code Reading Instructional Strategy

- Analyzed code metrics for 250 code samples with Clang and Python.

Ninhando | React, TensorFlow.js

2022 Georgia Tech Hackathon - Best Retro Hack

- Built a React app that plays an NES emulator with hand gestures via a TensorFlow.js vision model.

Canine-GANs | Python, CUDA, C++

- Built a performant data pipeline for a GAN to transform bone STLs to X-ray images for a biomechanics research lab.

Sheltr | React.js, Google Maps API

2021 UC Davis Hackathon - Overall Winner: Best Hack for Social Good

- Built a React app mapping government housing data to simplify the housing search for lower-income families.
