I build cloud orchestration and fault-tolerant services, with experience scaling simulation pipelines, LLM agent deployments, and analytics backends on AWS.

Experience

Khorium | CTO | February 2026 - Present

- Scaled to thousands of concurrent simulation jobs with AWS Step Functions, SQS, and ECS Fargate orchestration.
- Built fault-tolerant ECS workers with DLQ retries and process-isolated meshing so one crash can't stop the pipeline.
- Built end-to-end integration tests covering the CAD-to-simulation pipeline to catch regressions before release.

Amazon | Software Development Engineer 2 | September 2023 - February 2026

- Scaled LLM agent for internal HR BI tool to 99.9% availability and 100+ concurrent users via AWS ECS/CDK.
- Scaled data analytics backend by 200% in Amazon Athena query concurrency to support 2x user growth.
- Led complex data transformation efforts for Java proxy service, implementing caching to ensure low latency.
- Mentored junior engineers on scalable service design and deployment strategies.

NEC X | Full Stack Engineer | February 2023 - August 2023

- Built reliable, distributed software from 0 to 1 for startups in NEC's venture studio portfolio.

Amazon Web Services | Software Engineering Intern | May 2022 - July 2022

- Improved search experience for AWS CloudFormation Registry using OpenSearch and Lambda-driven backfill process.

American Express | Software Engineering Intern | June 2021 - August 2021

- Built a modular pipeline for an incident enrichment AI, increasing application recovery capabilities in Golang.

Education

University of Florida | B.S. in Computer Science | December 2022 | GPA: 3.74

Skills

Python, Java, Go, SQL, Bash, AWS Step Functions, ECS, Lambda, SQS, DynamoDB, CDK, PostgreSQL, Git

Projects & Research

Canine-GANs | Python, CUDA, C++

- Built a performant data pipeline for a GAN to transform bone STLs to X-ray images for a biomechanics research lab.
